REPORT PRODUCT SERVICE

To: All Customers

Date: 04.06.2018

Attn:

Ref:

Subject: CONTITECH® FORTRESS® 300 – 1000 – 1200 Hose Products

CONTITECH® FORTRESS® 300 – 1000 – 1200 Hose Products have been using TRICLOSAN (CAS 3380-34-5) antibacteriological and antimicrobial product protection blended with the CARBRYN® cover compounds.

In view of the most recent ECHA publications relating to TRICLOSAN

ECHA BPC 066 2015

ECHA A 018 2014

we hereby confirm that use of the active ingredient TRICLOSAN has been discontinued for all hose products manufactured after December 2017.

To offer a comparable level of bacteriological and microbiological protection TRICLOSAN has been replaced by MICROBAN® Z-TECH® technology using Zinc Phyrithione (CAS 13463-41-7) as active ingredient.

CAS 13463-41-7 is not listed under REACH SVHC substances as per date of this document.

Peters Rubber & Plastics BV is currently updating all product specifications and documentation to reflect this change.
